---

## **Aus Mining Token (AUSMT)**

Australia's First token based 100% Renewable Energy Mining Farm with 51% of Net Mining Earnings Used for the Buyback and Burn of the AUSMT token.

### **Mining should be sustainable and accessible to all.**

Across the world, the costs for energy, land, and equipment have shutout large segments of the population from being able to contribute, support, and benefit from mining. This has left the vast majority of mining in the hands of the already wealthy and powerful. At the same time, environmental concerns and, in some instances, increasing energy costs on the public have necessitated a shift away from using traditional energy sources for mining.

AUSMT aims to remedy this through its visionary founder and strong community, and its pledge to use only 100% renewable energy.

### **About the visionary founder.**

Andrew Bell is the founder and owner of AUSMT. It is Andrew's vision for AUSMT to be a 100% renewable energy powered blockchain mining farm.

Andrew's experiences, described further below, are what inspired and lead him on a path to create AUSMT.

In his late teens, Andrew joined the Australian military. While in the military, Andrew was witness to the emotional and mental health challenges, suffered by some, after having been deployed to conflicts around the world. Witnessing these challenges motivated Andrew to focus on what was most important to him: family.

With his family in mind, Andrew was determined to find a way to build something meaningful, something his four children could be proud of, and something that would be a positive force in the world. If it could create financial freedom and generational wealth for his own family, as well as others as part of a community, that would be an added bonus.

Andrew's path started with trying his luck at day-trading stocks, which he soon found was not a viable route to achieving his goals. He then decided to start researching crypto-currencies, with a focus on Bitcoin. Several years ago, he came to the conclusion that crypto mining was a viable path to achieving his goals. It would also afford him the opportunity to do something he has always had a passion for: building something from the ground up. Since then, Andrew has been testing, learning, and researching new strategies to maximize mining efficiency and profitability.

In late 2021, Andrew began working towards his goal of bringing crypto mining, and with it the potential for financial freedom and generational wealth, to others.

### **Through this, AUSMT was born.**

Since its inception, the community has been an important part of AUSMT. Through weekly video chat sessions, "toolbox meetings," and social media competitions, AUSMT has cultivated a community in which all feel welcome to ask questions, offer suggestions, and contribute in other ways.

In fact, since its launch, some members of the community have felt so invested in AUSMT, they have taken on formal and informal roles to make substantive contributions. These roles include creating AUSMT artwork and designs, moderating Telegram chat rooms, updating the website, and even writing code.

AUSMT knows that a strong community isn't something you can buy. It is something that takes sincere effort to create. But once created, a strong community is a resource that contributes to the strength, vitality, and long-term viability of any project.

Simply put, AUSMT knows that building something together is always more fun than building something alone.

### **Pledge to use only 100% renewable energy.**

It's no secret that the use of traditional energy for mining has been and continues to be damaging to the environment. In some places, the use of traditional energy for mining has even increased energy costs for the general public.

Simply put, it is no longer prudent or sustainable to mine without any regard for where the energy used comes from or how it is generated.

AUSMT aims to remedy this with a pledge to use only 100% renewable energy. This means all energy used by AUSMT for mining will be from solar, wind, and/or hydropower. AUSMT believes this is the only way to ethically mine.

### **AUSMT takes its renewable energy pledge seriously.**

The largest ongoing expense with mining is energy, with purchased renewable energy often being more expensive than traditional energy sources. This has often made it prohibitively expensive for individuals to set-up their own mining operations.

AUSMT aims to remedy this through the purchase and ownership of its own solar, wind, and/or hydropower energy generators. This will eliminate a large ongoing expense which means more funds to expand operations and benefit its investors.

### **Path to implementation: the Mining Company; the Solar Company**

AUSMT plans to create two companies: the Mining Company and the Solar Company.

-The Mining Company will purchase and manage the miners. After expenses are paid, a portion of its earnings will be paid to the Solar Company.

-The Solar Company will purchase and manage the solar generators, and its accompanying equipment. It will also provide energy to the Mining Company.

By creating the Solar Company, AUSMT will be able to more easily apply and qualify for government provided: (1) rebates for the purchase and installation of renewable energy equipment; and (2) year-end tax credits. The rebates could be considerable, including up to 50% of the total price to purchase the solar equipment.

AUSMT will always look for ways to make sure every dollar spent goes further. By doing so, AUSMT will be able to maximize value for token and NFT holders.

### **AUSMT holder benefits.**

By purchasing and holding AUSMT, holders can feel good about supporting a truly 100% renewable energy mining operation while at the same time enjoying the benefits of the following tokenomics:

#### **Transaction Tokenomics:**

Every buy, sell, and transfer transaction of AUSMT is taxed 8%: with 6% being used for native reflections to all holders; and 2% being added to the Liquidity Pool.

#### **Mining Tokenomics:**

Net earnings will be used as follows:

-51% of profit – Buyback and Burn of AUSMT Token	Minimum
-10% of profit – Miner expansion	Variable
-34% of profit – Solar expansion	Variable
-5% of profit – Company/Marketing	Variable

AUSMT believes these tokenomics are unmatched in the value they will bring to all holders of AUSMT.

## **AUSMT is truly hyper-deflationary.**

Prior to launch and shortly thereafter, just under 99% of all AUSMT were taken out of circulation by being sent to the burn wallet. This left approximately 1 billion AUSMT in circulation.

This means 99% of all native reflections generated from the transaction tax are also burned. This, in conjunction with the 51% of all mining net earnings being used for buyback and burn of AUSMT, means AUSMT may just be one of the most hyper-deflationary tokens in the crypto-currency space.

## **Renewable mining in focus.**

All ongoing project funding will be driven by the earnings generated by renewable mining. As the transaction tokenomics illustrate, all 8% of the transaction tax will directly benefit all AUSMT holders via native token reflections and liquidity pool growth.

All marketing, development, expansion, and upkeep expenses are completely dependent on earnings generated by mining.

AUSMT believes that in order to be truly successful as a community supported project, the goals of the Development Team and community need to be completely aligned. In this way, tying all funding to earnings generated by mining incentivizes the Development Team to create and maintain the most efficient and profitable mining operation possible.

## **Transparency is key.**

Unlike many other projects, AUSMT appreciates the importance and value of trust building.

AUSMT commits to the following:

- KYC, by a third-party, of the founder and all board members.
- Dox of the founder to the community (which has already been completed).
- Audit of the smart contract.
- Regularly scheduled video chats.
- Once operational, a third-party audit of the miners hash-rate.

## **The mining strategy.**

As described earlier, the visionary founder of AUSMT has had extensive experience mining. Through this experience, AUSMT hopes to become one of the most efficient, environmentally conscious, and profitable mining operations.

In simple terms, the strategy is to mine the most profitable coin available at any given time. To begin, AUSMT plans to mine BTC, however, at different times, it may be more profitable to mine a different coin or combination of coins. Regardless of which coin(s) is being mined, the Mining Tokenomics remain the same.

Shortly after mining operations have commenced, a contracted mining strategist is expected to be added to the team to help maximize mining efficiency and profitability.

AUSMT believes that success in mining requires the ability to be flexible and responsive to any challenges that may arise, including changes to market conditions.

## **The farm.**

**Land:** 7 acres of property located about one hour outside of Sydney, Australia has already been leased.

**Huts:** The first of several huts, that will house the mining equipment, has already been constructed.

**Solar:** A contractor has already been selected to install the solar panels and inverters.

**Wind:** A 6kW wind turbine has been ordered.

**Hydropower:** Small scale hydropower turbine prototypes have already been developed, and if needed, will be installed on a larger scale on the farm.

## **The miners.**

For mining, AUSMT will use a combination of Application-Specific Integrated Circuits (ASIC) and Graphics Processing Units (GPU).

As noted earlier, AUSMT believes that versatility is key to the profitability of the mining operation. To the extent possible, equipment selected will be versatile enough to mine different coins, depending on market and mining conditions.

## **The AUSMT mining pool.**

This pool allows individuals from all around the world to connect to the AUSMT pool. As of this writing, 13 coins are available to be mined with fees ranging from .5% to 1%. By being part of this pool, individual miners will be able to benefit from increased mining efficiency.

Any fees collected from this pool, after expenses are paid, will be used in accordance with the Mining Tokenomics described earlier.

AUSMT believes that offering this pool is an important step in building a strong worldwide community. A bonus of this pool is the ability to potentially connect with and benefit from some of the brightest minds actively mining around the world.

## **Safety and Security.**

As the farm moves from hypothetical to real-world, AUSMT is paying particular attention to ensuring the property and equipment is both safe and secure. For example, the farm is private property that will have physical security measures in place such as fences, gates, surveillance, etc.

In addition to traditional security measures, AUSMT is also exploring other proven crime prevention strategies.

AUSMT is reviewing the most suitable solutions to ensure that the farm and mining equipment is adequately insured to mitigate the impacts of equipment breakdowns, cyber-crimes, and even mother nature.

Lastly, AUSMT believes in a whole community approach to emergency management and we look forward to reinforcing our partnerships with local stakeholders and law enforcement to keep the entire community safe.

AUSMT believes these principles will help mitigate any potential risk factors.

### **The Generation 1 NFTs.**

Shortly after launch, 505 Lighting Bolt NFTs ("Generation 1 NFTs") were minted which yielded approximately \$50k USD. The funds raised will be used to purchase equipment for the farm.

The payout for the Generation 1 NFTs is treated as an overhead expense. To begin, Generation 1 NFT holders will earn \$1 USD per day per Generation 1 NFT. As operations expand, the amount earned per day per Generation 1 NFT will be increased.

At this time, the only way to procure one of the Generation 1 NFTs is to purchase it from another holder. Over time, the expectation is that the Generation 1 NFTs will become more scarce as AUSMT attempts to purchase them back and burn them.

### **The Future.**

Expansion. As the farm increases its mining capability, AUSMT may use a portion of its profits to expand into other countries.

To help facilitate this, AUSMT would partner with select holders and provide them with support in order to allow them the opportunity to create a 100% renewable energy mining farm in their home country.

### **Notice and disclaimer.**

The information in this whitepaper is for informational purposes only and does not contain any investment or financial advice.

None of the information in this document constitutes, or should be relied on as, a suggestion, offer, or other solicitation to engage in, or refrain from engaging in, any purchase, sale, or any other investment-related activity with respect to any virtual, digital, or crypto currency (hereafter, collectively referred to as crypto-currency.). Crypto-currency investments, like AUSMT, are volatile and high risk in nature. Do not invest more than what you can afford to lose.

The information shared in this whitepaper is not all-encompassing or comprehensive. It does not in any way intend to create or put into implicit effect any elements of a contractual relationship. The primary purpose of this whitepaper is to provide potential AUSMT token holders with pertinent information for them to thoroughly analyze the project and make an informed decision.

Prior to your participation in the purchase of AUSMT token, we strongly advocate a careful study of this whitepaper and all the documents associated with it. Please do your own research before making any investment decisions. Certain statements, estimates, and financial information featured in this whitepaper are forward-looking statements. These statements are based on and take into consideration certain known and unknown contingencies/risks which in eventuality may cause the estimated results to differ factually and substantially from the featured estimates. Regarding AUSMT's NFT payouts, the numbers provided are estimates ONLY and subject to change. There is no guarantee these figures will be achievable due to multiple variables (i.e., price of crypto-currency at time of mining) impacting the final payout figures.

Crypto-currencies have become a primary target of regulation in many major countries in the world. It is impossible to predict how, when or whether regulatory agencies may create new regulations with respect to such technology and its applications to include AUSMT. AUSMT may cease operations in the event regulatory actions, or changes to law/regulation, make it illegal to operate in such jurisdiction, or commercially undesirable to obtain the necessary regulatory approval(s) to operate in such jurisdiction.

As at the date, AUSMT is still under development and its design concepts, algorithms, codes, and other technical details/parameters may be frequently updated and changed. Although this whitepaper contains the most current information relating to AUSMT token, it is not complete. The whitepaper for AUSMT token may still be adjusted and updated by the AUSMT team as needed. The AUSMT team has no obligation to keep holders of AUSMT informed of every detail regarding the project, hence insufficient information disclosure is inevitable and reasonable.

There is a risk the development of AUSMT will not be executed or implemented as planned, for a variety of reasons, including without limitation the event of a decline in the prices of any needed asset, price of crypto-currency, BTC halving, unforeseen technical difficulties, and shortage of development funds.

There are other risks to consider regarding the purchase of crypto-currency, including AUSMT. Hackers or other malicious groups/organizations may attempt to interfere with AUSMT in a variety of ways but not limited to, malware attacks, denial of service attacks, consensus-based attacks, smurfing, and spoofing. In addition, the potential risks briefly mentioned above are not exhaustive and there are other risks associated with the purchase of AUSMT (weaknesses in structure, etc.). You should do your own research to better understand the overall framework, mission, and vision for AUSMT prior to purchasing.
